

KairoiSuite at a glance

KairoiSuite is an integrated software solution for analyzing and optimizing the productivity of healthcare organizations, which can thereby increase revenue and patient satisfaction without adding overhead. Data analytics yield user-friendly dashboards that help identify causes of lost productivity. The solution includes a robust logistics engine, enabling clinic managers to optimize scheduling and use of staff and other resources with ease. An integrated SaaS product, KairoiSuite requires no on-site IT support and draws data from existing EHR systems.

Advantages

- Maximizes productivity of providers and optimizes use of available resources
- Seamlessly integrates analytics and workflow optimization
- EHR-agnostic, empowers clinics to capitalize on historical appointment data
- SaaS solution facilitates rapid configuration and deployment; requires no on-site technical support

There is little doubt that the approach taken by Kairoi will improve both efficiencies and effectiveness of healthcare organizations. In the final analysis, our organization was able to show improvements, with additional open slots added to a provider template and reduced downtime for providers due to cancellation and no-shows.

Breakthrough Workflow Solution for Healthcare Decision Makers

KairoiSuite™ is the only cloud-based schedule-optimizing solution that integrates expert analysis of your clinic's performance with a powerful logistics engine. It enables clinic managers to schedule based on actual data, resources, and preferences, yielding immediate increases in capacity, productivity, and revenue.

The number of Americans aged 65 and older is predicted to more than double by 2060. Along with other social and demographic effects, this shift will intensify stress on medical services. With demand increasing and providers retiring, medical professionals will be spread thin. These impacts are already being felt, with healthcare organizations struggling to balance operational efficiency, provider workloads, and patient satisfaction. In this environment — whether in a fee-for-service or capitated payment system — healthcare decision makers need to continually evaluate and optimize clinic productivity, for the benefit of their staff, patients, and financial well-being.

Kairoi Health's comprehensive solution is its software as a service (SaaS) product, KairoiSuite™. This application suite has two major components: KairoiLogic™ equips decision makers to quickly and easily quantify the performance of their clinics, compare the productivity of individual providers, and identify causes of lost productivity and revenue. The KairoiScheduler™ component leverages insights gained from KairoiLogic to design optimized scheduling templates based on historical data, clinic goals, and provider preferences. Used in tandem, they can streamline operations, reduce stress on providers, enhance patient satisfaction, and increase revenue lost through inefficiency.

Unique among scheduling solutions, KairoiSuite offers:

Robust, User-Friendly Analytics

Powerful data analytics are coupled with user-friendly key performance indicator dashboards that identify causes of lost productivity and facilitate benchmarking of clinic and provider performance.

Easy-to-Use Schedule Optimization

The solution integrates an industry-proven logistics engine that facilitates "what-if" scenarios and creates customized, optimized schedule templates that reflect practice goals and individual provider preferences.

EHR-Agnostic & Easy to Deploy

KairoiSuite is compatible with the most popular EHR systems. Architected to be delivered as software as a service (SaaS), it can be deployed rapidly with no on-site technical support and no additional labor for already-burdened providers.

How the KairoiSuite Applications Work Together

KairoiLogic™

Robust Analytics & Planning

KairoiLogic analyzes an organization's historical appointment data and helps identify opportunities to improve the efficiency of clinical operations. A proprietary data-cleansing engine removes data artifacts and ensures that analysis is based on complete and valid records. Reports are presented in user-friendly dashboards, which helps decision makers understand their clinic's appointment mix by type (e.g., CPT code) and status (kept, cancelled, no-show). These reports facilitate benchmarking of clinic and provider productivity, enabling objective and quantitative discussion of performance. Over time, decision makers can conduct ongoing analysis with KairoiLogic to track progress and respond to new requests from clinic managers and/or individual providers.

KairoiScheduler™

Easy-to-Use Schedule Templates & Monitoring

KairoiScheduler is a logistics-based solution for creating appointment scheduling templates that address identified challenges and support provider preferences. A robust optimization engine, designed specifically for clinical operations, produces schedule templates based on parameters tailored to the client's clinics. Easy-to-use tools equip decision makers to conduct "what-if" scenarios based on modifying assumptions and use of resources. Impact analysis can be done in seconds and minutes, not hours and days. Clinic managers can easily modify templates to accommodate individual provider preferences, thus increasing staff satisfaction.

KairoiSuite™

Schedule Smarter
